Print

The final step of the light panel is to choose, design and manufacture the desirable print you want to light up. Every standard PVC film on milky and rigid print works perfectly with Lumosigns light panels.

Lumosigns light-guide plate

The most important part of the light panel is the acrylic sheet designed for even light distribution on the entire surface of the product, leaving no room for hot spots or darker areas you want to light up.

Reflector

A flexible material designed for supreme light reflection and color enhancement, making the most of LED lighting and acrylic sheet.

LED strips

High power LED strips with integrated Intelligent Control (IC) system for ultimate reliability and maximum lighting effect.

Magnetic frame

To deal with the heat LED bar is generating, high cooling efficiency aluminum frames are used to cool down the LED bar and to ensure optimal operating temperatures and long lifespan of the product.

Lighting Projects

Example

PRINT ON BACKLIT

Lumo Sheet 0: file preparation

Lumo Sheet 0 top visual layer production consists of: color printing on milky sheets and plotter cutting of self-adhesive PVC.

DESIGN ELEMENTS AREA

Please note that the standard magnetic frame is 29 mm wide. This means that the 30 mm wide margins are unlit areas. The safe zone for lighted design elements should be 35 mm smaller from each border.

FILE PREPARATION

All elements for cut plotting should be in vector file format. For detailed file preparation, please get in touch with your printing house.

CALCULATION EXAMPLE

EXTERNAL FRAME (BACKGROUND) SIZE	DESIGN ELEMENTS AREA
500 x 700	430 x 630
1000 x 700	930 x 630
594 x 840 A1	524 x 770
2800 x 1250 Max size	2730 x 1180
